

Genpharm is a company that mainly strives to rapidly provide patients who have rare diseases with treatments which would otherwise take several months or years to become available in the region, if at all

Genpharm currently focusses on drugs targeting the root cause of diseases such as Duchenne Muscular Dystrophy, a cardiovascular patch that can be used to repair heart deformities, and provides the first Non Invasive Prenatal Diagnostic test that can check for fetal trisomy 21, 18, and 13

Genpharm has several partners, from Novartis to Sintetica, and their portfolio is ever expanding as they source the most effective drugs needed to treat rare conditions in the UAE.

Genpharm's role is particularly crucial in a region such as ours, due to the frequency of consanguineous marriages and the stigma surrounding those with conditions or diseases that may affect a child's physical ability or appearance.

Though the company deals with rare diseases, a disease is considered 'rare' in the USA if less than 200,000 people are affected by it. Around 25-30 million individuals suffer from these 'rare' conditions in the USA alone
